Overview

Chengdu University was officially established with the approval of the Ministry of Education of China in 1978, but with the history of school running for one hundred years. It is a university jointly established by Sichuan Province and Chengdu City, and a key comprehensive university supported by Chengdu, a national central city. It is also the site of the Athletes' Village for the 2021 Chengdu FIFU World University Games. Chengdu University boasts a Grade III Level A affiliated general hospital with a history of more than 100 years and Sichuan Industrial Institute of Antibiotics, a national antibiotic research and development base.

The university focuses on the planning of major national economic and social development strategies, especially in the regions, to adapt to regional industrial clusters, key pillar industries and emerging industries, and to continuously improve the level of scientific research services and support capabilities. At present, there are more than 1200 scientific researchers and 74 scientific research platforms at all levels, including International Science and Technology Cooperation Bases of the Ministry of Science and Technology, State and Regional Research Center of the Ministry of Education, Key Laboratory of the Ministry of Agriculture, Key Laboratory of Sichuan Province, Engineering

Technology Research Center of Sichuan Province, Engineering Laboratory of Sichuan Province and 2011 Collaborative Innovation Center of Sichuan Province.

Established in 2016, Institute for Advanced Study of Chengdu University is strive to build a special region for scientific research and talent, focuses on the planning of major national economic and social development strategies, especially in the regions, to adapt to regional industrial clusters, key pillar industries and emerging industries, and committed to the research fields of advanced materials, clean energy, bio-pharmaceutical and green food, etc. Up to now, there are several high-level scientific research teams lead by academicians of the Chinese Academy of Sciences and Chinese Academy of Engineering, winners of the National Science Fund for Distinguished Young Scholars, Changjiang Scholars, etc., including nearly 100 Distinguished professors, Distinguished scholars, Full-time distinguished researchers, etc. The research platform equipped hundreds valuable instruments and equipment, whose total value exceeds 100 million, including JOEL F200 high-resolution field emission transmission electron microscope, JOEL 4700F focused ion beam, FEI QUANTA 450FEG field emission scan electron microscope, JOEL nuclear magnetic resonance spectrometer, MTS Landmark electro-hydraulic servo fatigue testing system, etc.
